Web Developer Summary

- Write supporting code for Web applications or Web sites.
- Design, build, or maintain Web sites, using authoring or scripting languages, content creation tools, management tools, and digital media.
- Back up files from Web sites to local directories for instant recovery in case of problems.
- Write, design, or edit Web page content, or direct others producing content.
- Select programming languages, design tools, or applications.

TECHNICAL EXAMPLES OF WORK

Project Name:	iSubscribe	APIs, User Profile, Backend	GitHub
Project Description:	With the digital economy embracing monthly fees and reoccurring micro transactions easy to 'nickel and dime' our paychecks away. iSubscribe empowers users to manage their digital subscriptions and easily see their monthly spending patterns.
Technologies/ Frameworks Used:	React, React Router, Node, Express, Auth0 API, Bootstrap

Project Name:	FabLibs	Authentication, Backend, Product Owner| GitHub
Project Description:	Throwing a baby shower, bridal shower, or just need to get your digital fix camping? FabLibs is a Mad Libs style game that provides users with a simple intuitive experience. To play users must create a free account and select a category. They will randomly be served a lib to complete.
Technologies/ Frameworks Used:	Node, Express, Passport, Handlebars, Sequelize, CryptoJS

Project Name:	Grub Quest	APIs, Frontend Forms	GitHub
Project Description:	Grub Quest helps indecisive groups answer the age-old question, "What do you want to eat?" The users enter location information and eliminate possibilities from a list of culinary categories. Once a selection is made users are provided a list of restaurants and estimated Uber fares.
Technologies/ Frameworks Used:	JavaScript, CSS, Uber API, Foursquare API.

Previous Work Experience

Food Services of America   Scrum Master   July 2016 - Present
